Santiago Fernández

Software Engineer

Barcelona, Spain | safernan121@gmail.com
safernan.dev | linkedin.com/in/safernan12

Software engineer with 7+ years building fintech products and online games. Experience spans trading interfaces, full-stack investment flows, shared systems, and developer tools.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#, GDScript
Backend & Data: Node.js, NestJS, SQL, GraphQL
Development: Agentic AI Development, Developer Tooling, Automated Testing

EXPERIENCE

Skillcap Studio / Gambit Studio Nov 2021 - Present
Software Engineer (Full-Stack)

One of five core engineers on The Beacon (Godot, TypeScript/NestJS, GraphQL/Hasura), owning editor systems, developer tooling, and shared data infrastructure; contribute to code reviews and technical decisions.

- Own the product layer of the player house editor: built its placement-rule engine (rotated footprints, anchors, structural support, removal cascades), separated draft state from rules for testability, persisted layouts via ORM models and Hasura GraphQL, and improved startup time.
- Major contributor to Tinker, the team's node-based visual programming editor: built schema validation and issue diagnostics, dependency discovery, type-cast nodes, undo/redo, copy/paste, batch operations, and serialization.
- Designed and maintain an asset-import pipeline (extended Importality fork) turning layered Aseprite art into production animations, with import profiles and headless reimport; replaced manual setup across 1,500+ configurations.
- Replaced an ad-hoc content model with a typed, data-driven architecture covering creation and runtime use of 700+ assets and items, adopted as shared infrastructure extended by multiple engineers.
- Built the initial GraphQL client architecture and a local data layer mirroring production models, enabling development and testing without a live backend.
- Co-implemented cross-platform input (touch controls, virtual joystick, controller navigation, and mobile export configuration), expanding the devices and input methods the client supports.

Product context: 220K peak daily active users and 650K+ new accounts during its largest campaign.

CryptoMarket / Uppercap Oct 2019 - Nov 2021
Software Engineer (Full-Stack)

- **CryptoMarket:** Built the full frontend of the professional trading interface with Django and Node.js, integrating market APIs, candlestick charts, order-book views, order entry, and order tracking.
- **Uppercap:** Joined the original engineering team and co-implemented frontend/backend investment flows using Python, JavaScript, and Node.js, covering company profiles, investment rounds, and share purchases.
- Co-integrated Chilean bank APIs for credit-card payments and implemented investor portfolio features.
- Implemented blockchain contracts representing purchased shares and managing ownership vesting.

Company context: CryptoMarket reported 500K registered users and ~$3M in daily transactions by Oct 2021.

Primus BI Nov 2018 - Sep 2019
Software Engineer (Frontend)

- Maintained and improved company web interfaces before moving to the Uppercap initiative with CryptoMarket.

EDUCATION

Universidad de los Andes, Chile - Software Engineering, 2019
Teaching Assistant - Object-Oriented Programming
